

The most beautiful fabric between heaven and earth.

Awning Fabric Collection – Made in Germany

Printed is not woven!

Before making a final choice of pattern, please be sure to compare the illustration in this fabric brochure with an actual fabric sample in the showroom of your local markilux specialist dealer. Depending on the model, awning size and pattern, the awning cover will either be seamless or with transverse or longitudinal seams in a specific symmetrical arrangement starting from the centre of the awning cover.

collection one

can be found at markilux.com

The most beautiful fabric between heaven and earth.

Our unique covers help to create a special ambience

The colour and quality of the awning fabric are what help make the ambience on your patio something special. Colour nuances, patterns and textures succeed in creating that uniquely special effect by virtue of their brightness and hue. As a leading manufacturer of high-grade awning fabrics with 50 years of experience in the manufacture of textiles, markilux offers an unparalleled variety. The markilux textile design team is constantly developing new patterns in line with the latest trends, which are nevertheless characterised by their timeless appeal. Among the more than 200 patterns in thematically coordinated colour families, you are bound to find your very own and most beautiful fabric between heaven and earth.

markilux designer awnings have received a multitude of awards:

| Brand

| e.g. markilux perfortex

Reduced to the essence: Free. Time.

Premium quality made in Germany.

For over 50 years, markilux has been developing and manufacturing top-quality solar protection solutions. markilux designer awnings are characterised by their first-rate, multi-award-winning design and innovative technology. The production of awning and cover under one roof is the essence of what markilux “Made in Germany” represents, with the aim of making an al fresco lifestyle comfortable, convenient and enjoyable. With markilux, you can turn your favourite spot outdoors into something extra special. **The best under the sun. Create the most alluring shade in the world.**

markilux quality

High-quality materials and a comprehensive quality management system ensure that every markilux designer awning has a long operating life. As a company, markilux is certified to DIN EN ISO 9001.

markilux functionality

markilux combines innovative technologies and smart solutions to create high-end products. A multitude of accessories and operating options make it possible to individualise your markilux designer awning in line with your own personal wishes.

markilux service

The combination of a brand product with competent advice and professional installation on site makes your solution perfect. Qualified markilux specialist dealers offer a comprehensive service and are the personal contact in your vicinity.

markilux design

It is the perfect combination of form and function that turns an awning into a markilux designer awning. In this respect, markilux relies on its long-standing experience in R&D and design.

Self-cleaning effect

Water droplets pick up dirt particles and run off the awning cover taking dirt with them (the awning must be set at a pitch of at least 14°), ensuring you can enjoy your beautiful fabric for a long time to come.

Bonded awning covers

Panel joints bonded together ultrasonically ensure a consistent, unobtrusive appearance. Their excellent resistance to water, light and fluctuations in temperature ensures that the service life of the cover is extended substantially.

Light and weather resistance and resistance to fading

High-tech yarns dyed right to the core and the high-grade snc finish developed in house guarantee the most stunning shade in which to relax.

markilux Awning Cover Finder

markilux awning fabrics are designed, manufactured and tested in the markilux facility in Germany. Find your own personal favourite amongst the more than 200 cover patterns in the showroom of your markilux specialist dealer or with the **Awning Cover Finder at [markilux.com](https://www.markilux.com)**

markilux awning covers. Quality – Made in Germany.

Functionality can be so beautiful

When it comes to manufacturing awning covers, markilux leaves nothing to chance. The sunvas and specials fabric ranges are given the finishing touches using equipment developed in-house. This gives these awning covers a particularly long operating life and the necessary resistance to dirt and the elements.

markilux awning covers made from sunvas and sunbow generally offer the highest possible UV protection for textiles, with a UPF rating of 50+. This boosts the skin's natural protection factor by more than 50 times. You can enjoy sunny days for longer without a care in the world.

“Being fully involved, open to new ideas, thinking freely. Making technological advances, consolidating material awareness, fully utilising shape and colour. Treading new ground, creating a vision, making a statement. These are our goals. This is what motivates us.”

Annette Busch | Head of markilux Textile Design

Solar protection with a view

The sunvas fabric with special perforation technique stands for impressive transparency as well as good light and air permeability.

We recommend transolair be used in the markilux shadeplus, for lateral wind protection and increased privacy as well as for vertical roller blinds and glass canopy awnings.

This perforated awning cover allows a view of the outdoors while shielding from prying eyes at the same time. It ensures good air circulation between the cover and the glass. This effectively reduces the build-up of a heat cushion between fabric and glass. The creation of water troughs is minimised.

| XL | Fabric patterns of the series 338.. (250 cm fabric width) depending on the model available as widely woven fabric for seamless covers up to a drop of 230 cm.
Fabric patterns of the series 339.. (120 cm fabric width) are made up with a horizontal seam when used in a shadeplus, as a result, a fabric with a textured or flecked pattern will take on an appearance different from that of the awning cover.

Solar protection with Climate Plus

The slightly translucent fabric cover, featuring aluminium particles embedded in the high-tech yarns, reflects the sun's rays particularly effectively. For improved indoor climate control whilst maintaining a clear view of the outside.

vuscreen ALU is a modern sun and anti-glare protection solution for markilux vertical blinds and shadeplus fabric covers.

Ideal for conservatories

Gaps in the warp, woven into the fabric, make this perfotex fabric permeable to both air and water. The risk of the formation of water troughs in rain showers and the build-up of excessive heat between cover and glass is reduced. The aluminium coating applied to the series 332.. further reduces solar gain. The weatherproof finish also inhibits the accumulation of dirt and offers excellent water repellency.

The top of the material has been impregnated with a higher percentage of aluminium and should face upwards/ outwards to maximise solar reflection. The aluminium in the coating is visible, especially in the case of light cover patterns and under backlit conditions.

Create the most alluring
shade in the world.

colour on demand, valance, care and overview

colour on demand

Now you're calling the shots.

1625 good reasons to show your colours

With the 'colour on demand' colour system, markilux offers you the chance to choose your very own favourite colour for your personalised awning canopy.

The basis for this is a plain white fabric cover in the tried-and-tested markilux sunvas quality, which is dyed to RAL standards using state-of-the-art, highly lightfast dyeing processes. This enables us to achieve the usual high quality and the familiar technical specifications of sunvas fabric.

The best awning canopy under the sun.
To create the most alluring shade in the world.

© RAL Bohn 2026

Awning cover colour to suit your requirements. Incredible. True.

You select the colour of your choice from the Original RAL D2 Designer Colour Swatch. The dyeing order is undertaken on the understanding that there will be slight variations in material and production. You can receive a sample beforehand. Your markilux specialist partner would be happy to advise you.

The valance. For that classic look.

Valance style 1 – straight

Valance style 2 – wavy

Valance style 3 – arced

Valance style 6 – undulating

A valance is a small decorative piece of fabric suspended from the front profile

It gives your markilux folding-arm awning a classic look and is available in different shapes (depending on the model / optional). A standard matching braid colour has been assigned to each fabric pattern.

The pattern of the valance is always aligned with that of the cover. It is cut from the same piece of material and runs out symmetrically on both sides. In the case of striped fabrics, the valance shape is matched symmetrically to the stripes in the material. We cannot guarantee that the pattern repeat of a valance supplied at a later date will match that of the original cover.

Product characteristics of awning covers

Awning covers are made from technical fabrics which, whilst serving a functional purpose, are primarily decorative. They are high-performance products that meet strict technical requirements. During production, they undergo regular quality tests.

Requirements such as water pressure resistance, stiffness, dirt- and water-repellent properties, tear resistance and tear propagation resistance, colour fastness and many other characteristics are specified, measured and guaranteed by the manufacturer for each fabric.

Although only carefully selected, first-class fabric is used in production, there are limits to perfection. Minor irregularities such as knots, thickening and thinning of the yarn, isolated broken threads, and certain appearances in the fabric cover are occasionally the subject of complaints, but cannot be completely ruled out given the current state of the art.

Creases

Creases occur during the manufacture and folding of the awning fabric. When held up to the light, particularly with light colours, a dark line may be visible at the folded point; this is caused by the bending of the fibres (refraction of light).

Waviness (puckering) near the seam and in the middle of a panel

These can occur along the side hems, in the vicinity of the seams and in the middle of the panels.

The fabric cover is doubled at the seams. This results in different rolling diameters. The tension caused by the folding arms, the tensioning system, and the sagging of the winding shaft and/or the front profile can contribute to these effects. Puckering can also form if a 'water pocket, water trough' has built up during heavy rain.

Resistance to rain

Solar protection fabrics are impregnated with a water-repellent finish and remain rain-resistant during brief, light rainfall when used in accordance with the manufacturer's instructions and at an angle of pitch of at least 14°.

During prolonged periods of wet weather and/or heavy rainfall, the awning must remain closed or be retracted to prevent damage.

Once the fabric cover has become wet, the awning must be extended again immediately after the rain to dry, to prevent mould stains.

Side hems

The fabric cover is usually kept almost constantly taut by an active spring system. Whilst seams and hems act as reinforcement, they must also withstand the greatest strain.

When the fabric cover is rolled up, the hems and seams lie on top of one another, which further increases pressure and tension. This puts them under particular strain and causes them to stretch. When the awning is extended, this can result in the side hems sagging slightly.

How to take proper care of your awning cover

Dust can be removed whilst the fabric is dry using a soft brush. Leaves and similar debris should be removed immediately. Small stains should be removed using water and a standard, preferably liquid, mild detergent (5 per cent soap solution, water temperature max. 30 °C). Rinse thoroughly with water.

Detailed instructions containing all the important information on operation, care and maintenance are included with every awning delivery.

		□	Recommended for computer workplaces

Printed is not woven!

Before making a final choice of pattern, please be sure to compare the illustration in this fabric brochure with an actual fabric sample in the showroom of your local markilux specialist dealer.

Depending on the model, awning size and pattern, the awning cover will either be seamless or with transverse or longitudinal seams in a specific symmetrical arrangement starting from the centre of the awning cover.

In covers made from striped and printed fabrics, the pattern repeat may not be perfectly matched where the panels have been joined. Depending on the model and size, not all the maximum awning dimensions can be achieved if the cover is made using markilux sunbow.

Patterns with wider pattern repeats are shown on a scale of approximately 1:10.

Those with a narrow pattern repeat and plain fabrics are shown in full size (1:1).

The best under the sun. Create the most alluring shade in the world.

Innovative technology and the pinnacle of quality: markilux solar protection solutions have received both acclaim and multiple awards. Made in Germany.
